Application No. 09/995,655

IN THE CLAIMS:

Please substitute the following amended claims 1, 5, and 6 for pending claims 1, 5, and 6 as follows:

- (Amended) In a development system including a developer transport adapted for depositing developer material on an imaging surface having an electrostatic latent image thereon, comprising:
- a housing defining a chamber storing a supply of developer material comprising carrierand toner;
- a donor member, mounted partially in said chamber and spaced from the imaging surface, for transporting developer on an outer surface thereof to a region opposed from the imaging surface, said donor member having a magnetic assembly having a plurality of poles, a sleeve, enclosing said magnetic assembly, rotating about said magnetic assembly;
- a plurality of trim bars positioned about a donor roll at a predefined position and spacing around said donor roll, each of said plurality of trim bars including a vibrating member for disrupting a developer bed and reducing developer bed height of said developer material on said donor member to a predefine developer bed height within a development nip.
- 45
- 5. (Amended) The development system of claim 1, wherein each of said plurality of trim bars comprised of a shaped metal blade fastened to the wall of the development housing.
- 6. (Amended) The development system of **claim 1**, wherein said predefine developer bed height is between five and twenty carrier of the <u>carrier diameters</u>, with a preferred value being at ten carrier bead diameters.

Application No. 09/995,655

Claim 9 has been cancelled.

Please add the following new claims:

Blowell

11. (New) The development system of claim 1, wherein said vibrating member comprises a piezoelectric element.

Application No. 09/995,655

- 12. (New) In a development system including a developer transport adapted for depositing developer material on an imaging surface having an electrostatic latent image thereon, comprising:
- a housing defining a chamber storing a supply of developer material comprising carrier and toner;
- a donor member, mounted partially in said chamber and spaced from the imaging surface, for transporting developer on an outer surface thereof to a region opposed from the imaging surface, said donor member having a magnetic assembly having a plurality of poles, a sleeve, enclosing said magnetic assembly, rotating about said magnetic assembly; and
- a trim bar positioned about a donor roll at a predefined position and spacing around said donor roll, a trim bar including a plezoelectric element for vibrating and disrupting a developer bed thereby reducing developer bed height of said developer material on said donor member to a predefined developer bed height within a development nip.
